

Providing comprehensive **ecological and landscape architecture services** to help our clients expand the ecological horizon.

We bring 22+ years of experience on projects of all scopes and scales for corporations, organizations, and governments in the United States and internationally. We solve complex environmental issues, restore habitats, design resilient green spaces, and much more.

**1,400+ Projects**

Completed throughout the United States and beyond.

**40+ Experts**

Developing solutions that drive your project to success.

**1 Goal**

Bring higher ecological thinking to every project.

**Core Services**

**Ecological Restoration & Mitigation**

Creating native habitat restoration and mitigation plans that are resilient, regulatory-compliant, and integrated with the landscape.

**Landscape Architecture**

Combining sustainable design with ecological principles to create green spaces, living shorelines, master plans, native plant palettes, and green infrastructure features.

**Environmental Litigation Support**

Collecting data and developing strategies to quantify, model, and address environmental injuries through ecological solutions.

**Environmental Planning & Permitting**

Developing project-specific environmental strategies and coordinating with appropriate agencies to obtain regulatory approvals.

**Natural Resources Assessment & Management**

Assessing site and regional natural resources and creating informed management, monitoring, and conservation plans.

**Something Else?**

Our integrated team of ecologists, biologists, landscape architects, planners, GIS specialists, and other subject matter experts is here to help.
